POL-DOC-004 Records Retention and Data Integrity Policy (Rev 3)

Aurora Nutraceuticals Inc. · Controlled document · For training and demonstration only

1. Purpose

This policy (POL-DOC-004) sets the retention periods for quality records and the data integrity requirements for paper and electronic records at Aurora Nutraceuticals Inc. It applies to every department that creates or keeps GMP records.

2. Data Integrity Principles

All records must be attributable, legible, contemporaneous, original and accurate, and in addition complete, consistent, enduring and available (ALCOA+). Corrections on paper records are made with a single line through the original entry, initialled and dated, with the reason stated. Electronic records are corrected only through the system's controlled change function.

3. Electronic Records and Signatures

Electronic records and electronic signatures must comply with 21 CFR Part 11. Every GMP computerised system must keep a secure, computer-generated, time-stamped audit trail that records the creation, modification and deletion of records, including the identity of the user and the reason for the change. Audit trails are reviewed as part of batch record review.

Electronic records are backed up weekly to an off-site location, and a restore from backup is tested quarterly. Backup and restore results are recorded on form F-004-02.

4. Retention Periods

4.1 Batch manufacturing and packaging records: 7 years after the expiry date of the product.

4.2 Laboratory raw data and certificates of analysis: 7 years after the expiry date of the batch to which they relate.

4.3 Cleaning validation and process validation reports: 7 years after the validated process is retired.

4.4 Training records: 10 years after the employee's employment ends.

4.5 Supplier audit reports and supplier qualification files: 10 years after the supplier is removed from the approved supplier list.

4.6 Deviation, CAPA and change control records: 10 years after closure.

4.7 Equipment logbooks and calibration records: the life of the equipment plus 5 years.

5. Archiving and Destruction

Records are archived in a locked, fire-rated room with temperature and humidity monitoring, indexed in the archive register. Records may be destroyed only after their retention period, with the written approval of the Quality Assurance Manager, and a certificate of destruction is filed in the archive

register.
